# WEATHER

## WEATHER SYNOPSIS BY REGION:

### **NORTHERN CALIFORNIA**

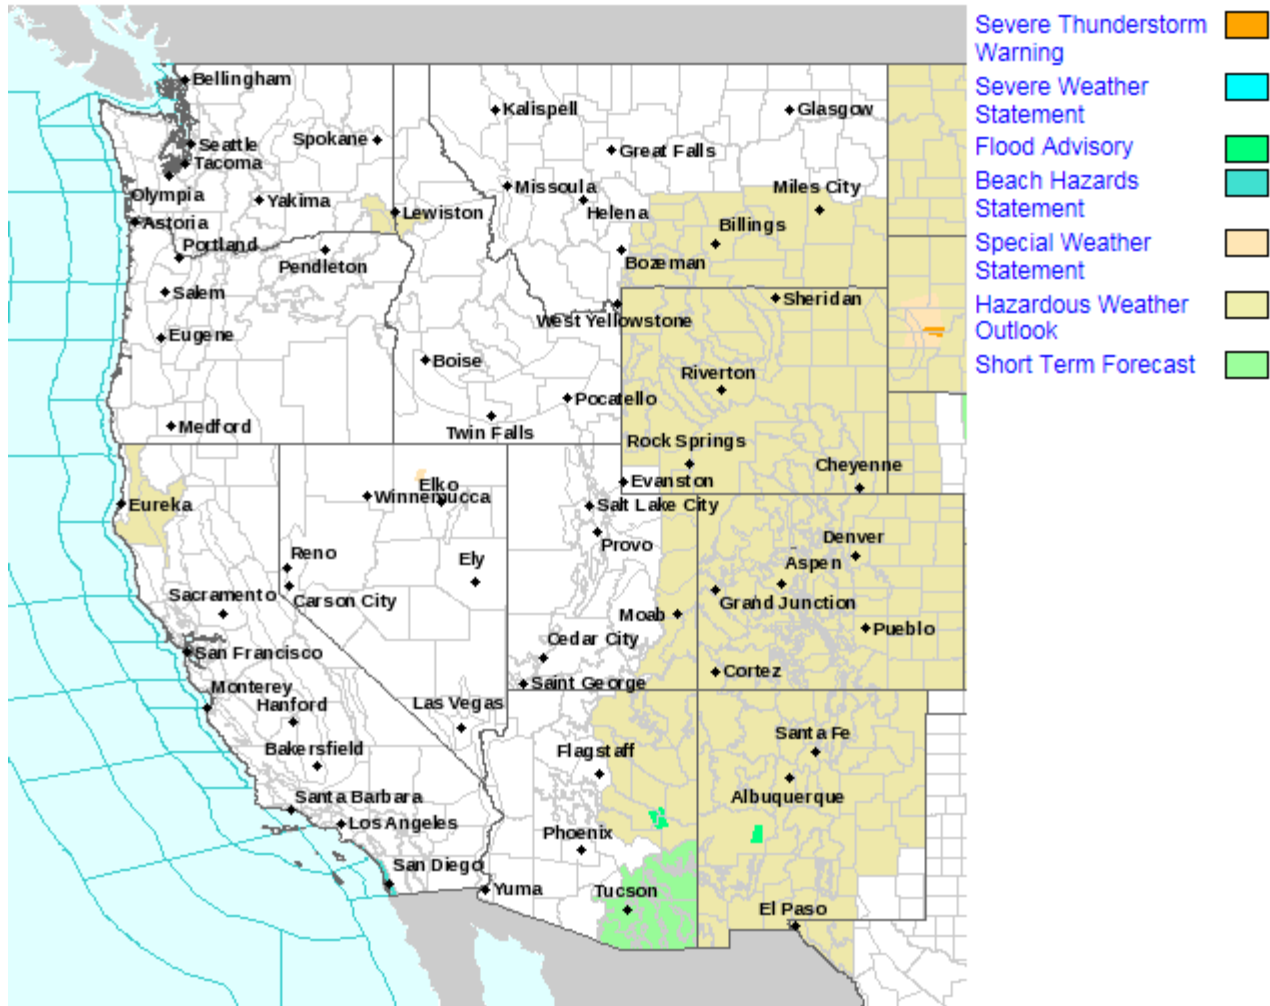

Some form of a low pressure trough will be lingering over Northern California for the next seven days, but higher pressure will make an appearance long enough later in the week to dry things out somewhat and bring afternoon highs up to near seasonal norms for a few days. In the meantime, enough moisture and instability will linger for the chance of some showers or thunderstorms today through Monday night in the northern mountains. Afternoon highs in the warmer inland valleys today and Monday will be 90-95 degrees with cloud cover likely helping keep things on the cooler side for the season. The trough weakens substantially Wednesday and Thursday, with drier, mostly sunny weather expected and afternoon highs around 100 degrees in the warmest inland valleys those two days. A low pressure trough is now expected to drop south out of the Pacific Northwest late in the week and over next weekend. Conditions will likely cool off again, but the chances for showers or thunderstorms are uncertain.

### **SOUTHERN CALIFORNIA**

A weak Pacific trough over the West Coast will bring a little below normal temperatures to the region through Wednesday, with 70s to low 80s in the mountains and mid-80s to mid-90s in the valleys. Minimum humidity will be mainly between 15% and 30% through Wednesday. Westerly afternoon winds of 15 to 25 mph with gusts to 40 mph with surface across the desert passes through Wednesday. An area of low pressure will form off the Central California Coast Thursday causing temperatures to cool Friday through next weekend. Isolated afternoon showers and thunderstorms will be possible over the Sierra both Monday and Thursday. The low pressure area off the Central California Coast may bring abundant moisture northward from what is now Tropical Storm Dolores and bring widespread showers and thunderstorms to the region next weekend. This will all depend on where the low pressure area forms and the exact track of Dolores.
